

Goro Nickel Mining Project

Client:

Goro Nickel S.A.S

Services:

Engineering, fabrication, surface preparation and painting, yard erection, insulation, galvanizing, testing/inspection, pre-commissioning, export packing and crating, and load-out

Destination:

New Caledonia

Yard:

Batangas Heavy Fabrication, Yard 1 San Roque, Bauan, Batangas 4201

AG&P was contracted by Goro Nickel S.A.S to undertake fabrication of modules for the Goro Nickel Mining Project in New Caledonia, the largest ferro nickel processing plant in the world. Every year, over 60,000MT of nickel and 5,400MT of cobalt are extracted from the mine and exported to the global market.

AG&P's comprehensive scope of work included shop/detailed drawings, engineering, supply of materials and other tertiary items, material management [free-issued], fabrication, surface preparation and painting, yard erection, insulation, galvanizing, testing/inspection, pre-commissioning, export packing and crating, and load-out.

AG&P constructed 90% of the project infrastructure at its heavy fabrication yards in the Philippines, totaling 322 modular units with peak manpower of 3,500. AG&P's FieldCOM team also supplied over 1,300 personnel for onsite construction, commissioning and operations and maintenance (O&M) works in New Caledonia.

AG&P successfully completed its project scope with zero Lost-Time Incidents (LTI). AG&P has an unmatched global safety record with more than 50 million consecutive man-hours without LTI and only one minor incident over the last decade.
