

ENI Onshore Gas Compression and Treatment Plant

Operator:
ENI

Client:
ABB

Services:
Manpower supply, installation and modification of structural, mechanical, electrical and instrumentation systems

Location:
Congo, Africa

Project site:
Gas Treatment Plant,
M'Boundi
Congo, Africa

AG&P has undertaken electromechanical and hook-up activities for the ENI PW1 Onshore Gas Compression and Treatment Plant in M'Boundi, Congo, Africa. This plant was designed to produce 60 MT of gas per hour and 1,440 MT per day at 50-240 bars pumped directly to the Djeno electric power plant, which currently supplies most of the country's electricity.

AG&P's scope of work also included the erection of the steel structure and stick-built pipe spools, assembly of HVAC ducting for the control room, local electrical room (LER) and electrical buildings.

AG&P mobilized almost 200 highly skilled workers including plate and pipe welders, pipefitters, millwright, steel and pipe erectors, crane and equipment operators, instrument technicians, electricians, instrument fitters and foremen. The team was deployed to complete the structural, mechanical and piping works and other related infrastructure. Our workers arrived onsite ready to work and fully trained to comply with the latest international safety and quality standards.

AG&P is licensed by the Philippine government to recruit, process and deploy locally based workers to overseas jobs. We are a consistent recipient of awards and recognition by the government and clients for excellence in overseas manpower deployment.
