

AG&P wins Best Global Energy Infrastructure Company for 2018

Global Energy Magazine recognizes AG&P's innovation in the global energy sector

Manila, Wednesday, January 2nd, 2019 – Atlantic Gulf & Pacific (AG&P), a global leader in gas logistics and construction services, ended 2018 on a high picking up the award for *Best Global Energy Infrastructure Company* in the inaugural Global Energy Awards.

The awards were coordinated by Global Energy Magazine, a new global platform for over 85,000 people working in the energy sector worldwide focusing on key issues relating to energy efficiency, infrastructure and technology, oil and gas, and renewable energy. The Global Energy Awards recognize companies that go above and beyond in developing new solutions to enhance access to, and uptake of, cleaner energies including both traditional and alternative energy sources.

Discussing the winners, Edward Faulkner, Awards Coordinator, said, “As with all of our awards, the 2018 Global Energy Awards were awarded purely on merit, and we scoured the international energy space to find these deserving companies. I wish all of my winners warm congratulations on their success and look forward to hearing more about their future achievements over the coming years.”

Innovation was the key reason behind AG&P's win. In a first for the industry, AG&P is making clean natural gas conveniently available at lower costs to multiple customer streams in emerging markets through a vertically integrated platform. This unique platform combines AG&P's modularization and FieldCOM execution expertise with its LNG commercial, engineering and technical know-how to deliver standardized, scalable LNG terminal solutions that match demand, allowing for reduced costs and accelerated schedules.

In addition, central to the vertically integrated approach is demand aggregation from small- and mid-scale end-users in these markets. Anchored on its City Gas Distribution (CGD) networks, AG&P aggregates downstream gas demand from industrial, transport, commercial and residential customers. AG&P also handles global sourcing of LNG and/or domestic gas to meet demand and takes care of all logistics, including LNG transportation via truck, dispensing stations, existing pipeline or break-bulk vessels, as well as onsite equipment at the customer's facilities.
