

Risco Energy Group Pte. Ltd. (Risco) is an independent, privately owned energy investment company focusing on oil and gas. It originates, invests, develops, owns and operates energy assets in Asia. Risco focuses on building out midstream and downstream LNG infrastructure to enhance the supply chain for customers in Indonesia and across the region.

Risco has a joint venture with AG&P, a global leader in infrastructure solutions and modularized products for the energy, resources and industrial sectors. AG&P designs, manufactures, finances, charters, leases, operates and maintains regasification and storage terminals and vessels for LNG transportation and demand-stimulated assets. Together, the two companies are developing:

- End-to-end solutions for the movement of LNG and ultimately energy, making it easier and more cost efficient for customers to switch to LNG
- Efficient midstream and downstream LNG infrastructure solutions for power, bunkering, mining, transportation and industrial companies that are not served by existing LNG networks
- Innovative solutions for LNG storage, transport, regasification, power and full terminal solutions, as well as last-mile delivery vehicles and vessels

Risco and AG&P provide end-users with practical solutions that enhance the LNG supply chain, eliminate complexity, accelerate schedule and lower the overall cost of LNG distribution. By making LNG more accessible, affordable and sustainable, they are helping pave the way to a cleaner energy future.
