

AG&P Brings Small-scale LNG Solution to the Philippines

MANILA, Philippines, 18 May, 2016 – AG&P (Atlantic, Gulf and Pacific Company), the leading modular industrial solutions provider, announced the introduction of its small-scale LNG solutions to bridge the capacity demands for power in Southeast Asia. The announcement was made by Albert Altura, President, AG&P, in his keynote address at the third annual Power and Electricity World Philippines conference in Manila.

The Philippines provides a unique challenge for the distribution of energy to 100 million people living across 7,000 islands. Traditional power delivery models are often too bulky to be viable to meet relatively smaller-scale energy requirements. Small-scale LNG solutions, including floating storage, regasification and power, provide power plants tailored to the archipelago, from even 5MW all the way up to traditionally-sized plants. More importantly, small-scale LNG provides a clean solution without the soot and contaminants of old coal. With the recent decrease in the cost of LNG, such technology is now not only viable, but also strongly commercial.

Said Mr. Altura, “Philippines has the potential to be a trailblazer in delivering innovative small-scale LNG solutions that will make power more accessible and affordable. AG&P is poised to transform the way energy is being delivered in the Philippines and Southeast Asia with the introduction of our virtual LNG pipeline, comprising a network of smaller-scale economical delivery systems such as vessels, re-gasification terminals and smaller power plants with faster delivery times.”

About AG&P

Based in the Philippines, Atlantic, Gulf & Pacific Company (“AG&P”) delivers cutting-edge solutions to vessels, plants and projects across the infrastructure lifecycle. AG&P builds the world’s infrastructure in Lego-like pieces called modules from its two state-of-the-art manufacturing facilities 80km south of Manila, covering 150 hectares of land and capable of producing 125,000 tons of assembled modules per year. AG&P has modularized refineries, chemical, petrochemical, power and water plants, LNG apparatus, mining systems, offshore topsides and civil works such as ports and bridges. AG&P provides mission-critical, rapid and innovative solutions for infrastructure from the early planning stages all the way through to and including operations. Our service portfolio includes standardized and customized infrastructure solutions, modular project support and modular manpower. AG&P is also a world-leader in designing, building and operating solutions for the LNG supply chain and application infrastructure.

With 116 years of history, AG&P is committed to the highest safety and quality standards and invests heavily in developing its team of professionals, engineers and technicians through training and education. AG&P improves lives through a diverse range of community development programs offering education, medical services, charity, environmental solutions and relief support to those in need, with an emphasis on the communities where we operate. Further information can be found on the AG&P website at www.agp.ph
